Experience

Stanford Health Care

Emeryville, CA

Technical Solutions Specialist

Apr 2024 – Present

- Continue to deliver core IT field services across SHC locations, including installation, configuration, deployment, and maintenance of desktops, laptops, printers, scanners, and phones, ensuring device readiness and minimizing end-user downtime.
- Ensure asset management data (warranties, licenses, maintenance) is current across multiple systems to ensure accuracy and regulatory compliance.
- Execute hardware-refresh activities across multiple sites for end-user devices, coordinating with clinical and facilities teams to minimize disruption and ensure timely completion.
- Plan and implement routine software updates and security patches across devices and applications, supporting enterprise patch management standards and reducing vulnerability exposure.
- Build strong user relationships through proactive on-site support, timely ticket resolution, and thorough documentation of workflows to improve user experience and service quality.
- Support imaging and deployment workflows by following established procedures and contributing to runbooks; participate in periodic asset audits to improve data accuracy.

Stanford Health Care (Contractor via Apex Systems)

Newark, CA

Field Services Technician

Dec 2023 – Apr 2024

- Managed all aspects of the IT equipment lifecycle, including overseeing the installation, configuration, deployment, and maintenance of desktops, laptops, printers, scanners, and related software.
- Utilized Microsoft Excel and the Configuration Manager console to maintain and monitor asset information such as warranties, licenses, and maintenance information.
- Monitored IT related issues across SHC field locations, optimizing support and providing escalated assistance to enhance the onsite employee experience.

Genentech (Contractor via CyberCSI)

South San Francisco, CA

L2 Technology Analyst

Jan 2023 – Dec 2023

- Executed identical tasks as in previous role, leveraging established skills and experience to drive optimal company productivity.
- Contributed to the advancement of the IT department through active participation in various projects such as the internship redevelopment program and improvement of the IT Bar webpage.
- Installed replacement keyboard assemblies and touchpads; performed post-installation testing and ensured ESD-safe handling.
- Leveraged a ticketing system to document and address a wide range of issues, updating resolution steps to our knowledge base.

Genentech

South San Francisco, CA

IT Deskside Support Intern

Apr 2022 – Jan 2023

- Provided technical support and maintenance for a user base of 15000+ across various devices including Apple, PC, mobile, and printers by performing tasks such as backups, upgrades, recovery, and managing disk space to optimize device performance.
- Assisted 15+ clients daily in analyzing, troubleshooting, and diagnosing hardware problems to minimize blockers.
- Updated and implemented improvements to the IT team's Queue Manager Bot to maximize the efficiency of the IT ticketing system using HTML and JavaScript.

MiBolsillo Financial Technologies

Remote

Backend Developer – Contractor

Oct 2021 – Apr 2022

- Managed daily message generation and dispatching to MiBolsillo and Poupacerto users while maintaining its codebase.
- Led a team of 3 interns to develop and deploy Flask APIs for new customer-facing features within MiBolsillo App.
- Optimized the notification dispatching process through automation using Celery, RabbitMQ, AWS, and Docker.

Software Engineer Intern

Mar 2021 – Oct 2021

- Designed and developed an API Python script intended to provide the user with an accelerated savings plan.
- Devised an algorithm to determine savings targets within a defined timeframe by importing JSON financial data and computing category spending percentages.
- Wrote Python scripts to generate unique messages that are sent to notify users regarding their financial status.

Cisco Systems

Software Engineer Intern

Milpitas, CA

Jun 2019 - Sep 2019

- Developed and maintained 5+ Selenium automation scripts to perform regression testing of Webex Client functionalities.
- Configured and managed Jenkins automated build jobs on functional testing scripts to ensure proper operation of Webex Meetings.
- Set up and monitored vCenter Servers containing 1000+ virtual machines through NagiosXI for optimized endpoint testing.
- Improved quality assurance testing efficiency by 200% by developing an automated testing system using REST API calls to detect and repair inactive virtual machines and endpoints.

Projects

YouToDo

- Created a task list Flask application allowing users to write and mark daily tasks after completion.
- Implemented OAuth log-in security, encrypting user authentication information using bcrypt.
- Developed a database schema design and used MongoDB database to store and manage user data.

QA System

- Implemented a Python project designed to generate answers to questions based on a story's content using NLP techniques.
- Utilized NLTK libraries to learn the relationships between words by using a GloVe training model.
- Improved results of the QA system using Stanford NER, coreference information, dependency parses, constituency parses, and WordNet API.

Education

University of California, Santa Cruz

Santa Cruz, CA

B.S. Computer Science

Sep 2016 - Dec 2020

Coursework: Algorithms, Data Structures, Operating Systems, Web Applications, Database Systems, C++ and Python Programming, Natural Language Processing, Computer System Design, Programming Languages

Skills

Programming Languages: Python, Java, HTML, CSS, JavaScript, SQL, C, C++

Technologies: NPM, Flask, MongoDB, Vue, Node, Unix, Linux, py4web, Celery, RabbitMQ, Docker, AWS, Jenkins, MySQL, PostgreSQL, Core NLP, NLTK, BERT, Pintos, Postman, Jupyter Notebook, React, React Native, Ansible, REST API, Bash, NagiosXI, Selenium, Heroku, Firebase, Prettier, XML Android Studio, Jira, Confluence

Project Management Methods: Agile Software Development, Scrum
